				100.000

Procedure

1. Add Phase A and begin mixing.
2. Combine Phase B. Add to Phase A with rapid mixing and heat to 75-80°C. Once gum has dispersed and solution is clear begin cooling.
3. At 40°C or below, add Phase C materials and mix well.
4. Add Phase D and mix well. Adjust pH to 5.5-6.0.

How To Use

Apply 3-5 drops to towel dried hair, concentrating on the mid-lengths to ends.

Stability Tested

3 months Pending

Freeze/Thaw 3 cycles

Physical Data

Appearance Translucent Viscous Liquid

pH 5.50 – 6.50
