E Citric Acid (50% solution)	Citric Acid	---	qs
			100.00

Procedure

1. Add Phase A ingredients to a clean mixing vessel and begin mixing with an overhead mixer and propeller.
2. In a separate container, preblend Phase B ingredients to create a homogeneous slurry.
3. Slowly add Phase B into Phase A with continuous mixing. Increase agitation as needed.
4. Transfer batch to a homogenizer or planetary type mixer and slowly add Phase C with continuous mixing. Mix until batch is uniform and free from lumps.
5. If using a homogenizer, transfer batch to an overhead mixer with sweep impeller (or continue in planetary type mixer).
6. Add Phase D ingredients, one at a time, mixing until each material is uniformly dispersed before proceeding to the next ingredient.
7. Adjust to target pH with Phase E if needed.

How To Use

Apply a pea sized amount to an extra soft bristle toothbrush and gently brush teeth for two minutes. Expectorate when finished.
